Introduction

This document represents an overview and does not provide step-by-step instructions for configuration and operation of USB digital video cameras. The cameras are compatible with Microsoft® Windows™ 98, Me, 2000, or XP operating systems. Other features and detailed operation are included in the documentation on the installation CD, in the product software, or online. Also, refer to [Table 1, Presales and Customer Support contact information](#).

This document addresses configuration and operation of two cameras:

- Videology Model 20Z704 USB (Analog)
- Philips USB WebCam for PC (Digital)

Installation of USB Driver

To install the USB driver:

1. Exit all Windows programs.
 - **20Z704 USB camera:** Join the USB connector to the USB port of your computer. If you are configuring the 20Z704 USB camera, you must also connect the power cord. The Add New Hardware Wizard displays on your computer screen.
 - **Philips WebCam for PC:** Do not join the USB connector to your computer at this time.
2. Insert the driver CD for the appropriate camera into your CD-ROM drive.
3. The software checks and verifies your system and installation begins.
4. Follow on-screen instructions.
5. Restart your computer when installation is complete.
 - **Philips WebCam for PC:** Join the USB connector to the USB port of your computer at this time.
6. Depending on the camera that you have installed, navigate to configure preferences and **Settings** to set your image, camera, or audio controls.
7. When you are satisfied with your settings, you are ready to begin capturing images.

Operation in Secure Perfect

Continue with the following instructions for operation of your USB camera in Secure Perfect:

1. Log in to Secure Perfect.
2. From the Secure Perfect, Personnel menu, select **Person** to display the Person Form.
3. Select the **Photo** tab, then click **Search** to display a current list of records.
4. Select a person record from the records list, then click **Capture Image/Signature**. The Secure Perfect Image Capture Application screen displays.
5. Using the mouse, point to the photo block and right-click. A context menu displays.
6. From the context menu, choose **Select Input Device**. A Select Profile screen displays, listing the available input devices on your computer. By default, the input devices load from a file.

7. Select the input device that you are using to capture the photo image and click **OK**. (The next time you capture a photo, the program defaults to the input device you select at this time.) You are returned to the Image Capture Application window.
8. Click **Capture Photo**.
9. A Capture window displays for the selected input device. When the image of the person associated with this Person record is centered in the capture device display window, click **Capture Still Image**.
10. The image is captured and the Image Enhancement window displays, allowing you to crop, resize, or enhance the image.
11. When you are ready to accept the image, click **OK** to return to the Image Capture Application window.
12. When you are returned to the Image Capture Application window, select **OK**. The image capture and storage is complete and ready for imprinting on a badge design of your choice.

Note: Refer to the Secure Perfect Online Help system or *Secure Perfect Administrator's Manual* for additional details of the badge production process.

Technical support

For assistance installing, operating, maintaining, and troubleshooting this product, refer to this document and any other documentation provided. If you still have questions, you may contact Presales and/or Customer Support.

For assistance, we provide customers with several options (see [Table 1](#)). Our Customer Support phone number is available Monday through Friday, 8 a.m. to 7 p.m. Eastern Time. Protection plans are available for extended coverage.
